

CONNECT | CLOUD CONNECT

Connect reliably and securely to hyperscale clouds.

Continent 8's Cloud Connect service is a specialised solution that provides direct and secure connectivity between your infrastructure and hyperscale cloud service providers, including Amazon Web Services (AWS), Microsoft Azure and Google Cloud Platform (GCP), among others. You can simultaneously orchestrate hybrid and multi-cloud solutions across multiple locations and gain the global scale, performance and security your business needs to compete in today's global marketplace. This service is designed to enhance the security, reliability, and performance of connectivity to your cloud-based operations.

Two significant advantages of using Cloud Connect is its high level of security and improved performance over public Internet connectivity. By establishing a private connection, you can bypass the security risks typically associated with internet VPNs. This service also includes monitoring features and availability and performance Service Level Agreement (SLA), allowing you to manage the connection as an integral part of your network. This level of control and security provides peace of mind and ensures the integrity and performance of your data and operations.

We have forged strong relationships with major cloud service providers. This includes achieving Advanced Consulting Partner status with Amazon Web Services (AWS) and Microsoft Silver Partner as part of the Microsoft Partnership Network program.

“Continent 8 are a key and strategic partner for FanDuel and the combination of Continent 8 Data Center services and Amazon Web Services has enabled FanDuel to focus on its mission of being absurdly fan-focused by delivering the best product in the industry.” - **SHANE SWEENEY, VP OF IT, FANDUEL**
