Protect your critical web applications

Enterprise Web Application and API Security

Continent 8's Cloud WAAP delivers web application security to online businesses, globally.

Protect your API's and web applications against all known and zeroday exploits without deploying and managing infrastructure – let Continent 8 secure your applications while you focus on delivering business value with your web applications.

Our Cloud WAAP solution requires minimal configuration and ongoing management, pre-defined or custom templates can be used to protect web applications in seconds, and AI based ML not only detects anomalies and malicious bots, but also self-tunes configuration to ensure protection for custom applications. It uses multiple protection techniques to quickly and accurately mitigate threats while allowing normal traffic to proceed.

A full-featured AI-based ML WAAP that's easy to deploy and manage

With Continent 8's Cloud WAAP, enjoy the protection of a fullfeatured Web Application Firewall (WAF) as you rapidly roll out your applications without managing and maintaining your own infrastructure.

Your attack surface changes every time you deploy a new Internetfacing application, and you are deploying those Internet-facing applications faster than ever. You need a solution that can protect any web-based application you deploy, including short-lived applications that may only run for a short time and long-lived applications that can evolve rapidly as you adopt a DevOps approach to delivering applications and services at high velocity.

Highlights

- Al-based ML self-tuning and bot and anomoly detection
- Protection against OWASP and API Top 10, including cross-site scripting and SQL injection
- Rapid templated deployment
- Integrated with Continent 8 DDoS and Transit services
- Advanced analytics and reporting
- Complete security provided by advanced multi-layered and correlated approach
- Fine tuning for exceptions
- Powered by Fortinet

In 2020, there were 246,064,297 web application attacks in the gaming industry, representing about 4% of the 6.3 billion attacks tracked globally.

SECURE | Cloud WAAP

Web Application Threat Protection

Continent 8 Cloud WAAP is powered by Fortinet, and offers the same comprehensive approach including AI-based ML, Heuristics, IP reputation, protocol validation, application attack signatures, and more to defend your application against a wide range of threats, including the OWASP Top 10 and zero-day exploits.

Simplified Deployment

With predefined policies, Continent 8 Cloud WAAP delivers the security you need within minutes, removing the usual complexity required when setting up a WAF. More advanced users can easily enable additional security modules if needed, free of charge. Deploy in minutes and you're protected from threats such as cross-site scripting, cross-site request forgery, denial-of-service, brute-force attacks, and SQL injection.

Comprehensive Web Application Security

Using an advanced multi-layered and correlated approach, Continent 8's Cloud WAAP provides complete security for your external and internal web-based applications from the OWASP Top 10 and many other threats.
